## Table of Contents

<b>1.</b>	<b>INTRODUCTION .....</b>	<b>1</b>
<b>2.</b>	<b>DATABASING AND QUALITY ASSURANCE OF GEOCHEMICAL SAMPLES .....</b>	<b>2</b>
2.1	New Data .....	2
2.1.1	Source Rock Screening Data .....	2
2.1.2	Molecular Characterisation of Source Rocks .....	5
2.2	Molecular Analysis of Crude Oils .....	6
2.2.1	Reappraisal of Legacy Data .....	8
<b>3.</b>	<b>SOURCE ROCK EVALUATION .....</b>	<b>9</b>
3.1	Source Rock Stratigraphy .....	9
3.2	Organic Matter Content (TOC and Pyrolysis Yields) .....	11
3.2.1	Source Quality (Kerogen Type and Organofacies) .....	16
3.3	Measured Maturity (Well and Regional Depth Trends) .....	26
3.4	Calculation of Effective Source Fractions .....	30
3.5	Source Rock Lateral Distribution .....	34
3.6	Molecular and Isotopic Characteristics of Source Rocks .....	39
3.6.1	Source Parameters .....	40
3.6.1.1	Alkanes & Isoprenoids .....	40
3.6.1.2	Hopanes .....	42
3.6.1.3	Other Biomarkers .....	47
3.6.1.4	Bulk Fraction Isotopes .....	48
3.7	Summary of Geochemical Characteristics of Main Source Intervals .....	49
<b>4.</b>	<b>OIL MOLECULAR GEOCHEMISTRY .....</b>	<b>52</b>
4.1	Geochemical Data Review and Key Biomarker Recognition .....	52
4.2	Multivariate Statistical Analysis .....	56
4.3	Oil Biomarker and Isotope Interpretation .....	62
4.3.1	Oil Source Parameters .....	62
4.3.1.1	Key molecular and isotopic discriminants .....	62
4.3.1.2	Significance of seeps on Sao Tomé and Príncipe .....	73
4.4	Molecular Maturity of Oils .....	75
4.5	Post-Generation Alteration .....	80
4.5.1	Biodegradation .....	81
4.5.2	Fractionation .....	83

---

<b>5.</b>	<b>OIL FAMILIES .....</b>	<b>86</b>
5.1	Family A: Rio Muni Oils (Ceiba, Ebano, Oveng) .....	88
5.2	Family B (Kribi-Campo and P-2 Oils ) .....	90
5.3	Family C (Benita I-1 and Belinda O-3 and ?Ambar-1 liquids).....	92
5.4	Family D (Zafiro oil and Alba condensate, not Ambar-1).....	94
5.5	Oil-Source Correlation.....	96
<b>6.</b>	<b>CONCLUSIONS .....</b>	<b>99</b>
6.1	Source Rocks.....	99
6.2	Oil Families and Oil-to-Source Correlation .....	100
<b>7.</b>	<b>REFERENCES .....</b>	<b>102</b>

## List of Figures

Figure 1:	Screening Database of Source Rocks Samples including Legacy (Blue) and New Data (Red).....	5
Figure 2:	Map of Oils Assembled for Geochemical Analysis .....	8
Figure 3:	Stratigraphic Setting of Key Source Rock Intervals.....	10
Figure 4:	Schematic Wheeler Diagram (upper) and Geoseismic Section (lower) across the Rio Muni Basin Margin showing the Stratigraphic Relationships between SR1 Aptian, SR2 (Aptian-Albian) and SR3 (Albian-Turonian). The section runs east (right) to west (left) .....	12
Figure 5:	TOC Histogram (0-90%) of all Samples. Inset is an expanded 0-12% TOC Histogram (Note the predominance of younger samples with higher TOC).....	13
Figure 6:	Present Day TOC Histograms (0-12%) for all Samples in the Gulf of Guinea Geochemical Database which Fall Within One of the 5 Identified Source Rock Intervals (see Table 4 for statistics).....	14
Figure 7:	A pseudo-van Krevelen Diagram (Hydrogen Index, HI vs. Oxygen Index, OI) of all 984 Samples with Available Rock-Eval® Data in the Gulf of Guinea Geochemical Database .....	16
Figure 8:	Pseudo-van Krevelen Diagrams (HI vs. OI) for Samples In Identified Source Rock Intervals with Rock-Eval® data available in the Gulf of Guinea Database.....	18
Figure 9:	HI-T <sub>max</sub> Plot for 1,025 Source Rock Samples in the Gulf of Guinea Dataset, with Colours indicating Chronostratigraphy, and Symbols indicating TOC values .....	19
Figure 10:	HI-T <sub>max</sub> Plots for Individual Source Rock Intervals (1-5) showing a Lacustrine-Marine-Deltaic Transitions from Mid-Cretaceous to Miocene Times.....	21
Figure 11:	HI-T <sub>max</sub> Plots illustrating the Increasing Number of Better Quality Samples of Tertiary Source Rock (orange = Paleogene, yellow = Neogene). (see Figure 10 for legend) .....	22
Figure 12:	Cartoon showing Sub-Delta Source Rocks and some of the Processes leading to Intra-Delta Source Rocks (Samuel 2006, 2008).....	23
Figure 13:	Cartoon illustrating the Fresh Water Blanket Model leading to Anoxia in Delta Slope and Front Environments (Cornford, 2008).....	24
Figure 14:	Rock-Eval® S <sub>2</sub> Yields versus TOC for all Potential Source Rock Samples in the Gulf of Guinea Database .....	25
Figure 15:	Measured Vitrinite Reflectance Maturity Data (%Ro) plotted against Depth for all Samples in the Gulf of Guinea Database.....	27
Figure 16:	Measured Vitrinite Reflectance Maturity Data (%Ro) plotted against Depth with Colour indicating Generalised Sample Stratigraphy .....	28

Figure 17:	Apparent Uplift (km) from measured %Ro-Depth Profiles for all Wells in the Study Area (inset: %Ro-depth plot showing uplift reconstruction) .....	29
Figure 18:	TOC versus Rock-Eval <sup>®</sup> S <sub>2</sub> used to discriminate between Samples with Effective and Ineffective Source Potential.....	31
Figure 19:	Distribution of Oil- and Gas-prone Source Rocks (S <sub>2</sub> versus TOC) for Basins in and adjacent to the Study Area .....	33
Figure 20:	Sketch Illustrating the Regional Extension of Albian-Turonian Source Rock Deposition in the Gulf of Guinea (circle size proportional to TOC) .....	35
Figure 21:	Distribution of Source Rock Potential according to TOC in the Gulf of Guinea .....	37
Figure 22:	Distribution of Source Rock Potential according to Hydrogen Index in the Gulf of Guinea .....	38
Figure 23:	Histogram of Pristane/Phytane Ratios for all Extracted Source Rock Samples in the Studied Area.....	41
Figure 24:	Plot of Pr/nC <sub>17</sub> vs. Ph/nC <sub>18</sub> for All Extracted Source Rock Samples in the Studied Area.....	41
Figure 25:	Key m/z 191 Biomarker Distributions for the Gulf of Guinea: Mapped Indices of Oleanane (left) and Gammacerane (right) Indices for Source Rock Extracts (Insets - left: Oleanane in Yassoukou Marine-1, 2,745-95m, right: Paleogene; Gammacerane in Benito-1, 1915m, Aptian-Albian).....	43
Figure 26:	Source Lithofacies and Depositional Conditions based on C <sub>29</sub> /C <sub>30</sub> Hopane vs. C <sub>35</sub> /C <sub>34</sub> Extended Hopane Ratios.....	44
Figure 27:	C <sub>29</sub> -C <sub>30</sub> -C <sub>31</sub> Ternary Plot of Hopane Distributions Indicating Source Trends for Mid-Cretaceous and Tertiary Source Rock Extracts .....	45
Figure 28:	Source Rock Depositional Environment given by C <sub>25</sub> /C <sub>26</sub> Tricyclic Terpanes vs. Pristane/Phytane ratios .....	46
Figure 29:	Mass Chromatogram showing m/z 191 (upper) compared with m/z 205 (lower) for Rio Muni basin well Benito-1 (1915m) Aptian-Albian Source Rock Extract .....	47
Figure 30:	Mass Chromatogram showing Tetracyclic Polyprenoids (TPPs) in m/z 259 for a Solvent Extract of Benito-1 (1,915m) Aptian-Albian Source Rock.....	47
Figure 31:	β-carotane Identified in m/z 125 Mass Chromatogram for a Solvent Extract of Benito-1 (1915m) Aptian-Albian Source Rock.....	48
Figure 32:	Sofer Plot of δ <sup>13</sup> C (Saturate Fraction) vs. δ <sup>13</sup> C (Aromatic Fraction) for all Databased Source Rock Samples (diagonal=Canonical Variable of -0.47).....	49
Figure 33:	Mapped Values of Oleanane & Gammacerane in Oils (see Figure 25 for comparative source rock data).....	54
Figure 34:	Gammacerane Index Plotted against Oleanane Index in order to differentiate between Cretaceous and Tertiary Sourced Oils .....	55

Figure 35:	Example of a PCA Matrix during Pre-Screening in Sirius© to remove Blank Cells (indicated by blue squares) .....	57
Figure 36:	PC1 vs. PC2 plots of Scores (left) and Loadings (right) for the Dataset of all Oils & Seeps using Raw Peak Data .....	58
Figure 37:	PC1 vs. PC2 Plots of Scores (left) and Loadings (right) from all New 2007/08 Equatorial Guinea Oils based on Raw Peak Data.....	59
Figure 38:	PC1 vs. PC2 Plots of Scores (left) and Loadings (right) for the Dataset of all Oils and Seeps (new 2007/08 data) using Biomarker Ratio Data .....	60
Figure 39:	PC2 vs. PC3 Plots of Scores (left) and Loadings (right) for the Dataset of all Oils and Seeps (new 2007/08 data) using Biomarker Ratio Data .....	61
Figure 40:	Sofer Isotope Plot for Oils and Source Rock extracts Showing Sample Type and Stratigraphy (upper) & Field/Well and Basin name (Lower).....	64
Figure 41:	Pristane/nC <sub>17</sub> vs Phytane/nC <sub>18</sub> ratios for Sample Type and Stratigraphy (upper), and Basin and Field (lower) to Distinguish Source Rock Depositional Environment and Maturity .....	66
Figure 42:	Norhopane/Hopane vs. Pr/Ph for oils (symbols) and Source Rock Extracts (thin stars) to Distinguish Depositional Environment .....	67
Figure 43:	Extended Hopanes Versus Pristane/Phytane Ratios Discriminating the Gulf of Guinea Oils Mainly on the Basis of Source Rock Anoxia...	68
Figure 44:	Tri-aromatic Sterane Carbon Numbers as Predictors of Kerogen Type for Gulf of Guinea Oils.....	69
Figure 45:	Plot of Cheilanthane Ratios (C <sub>20</sub> /C <sub>21</sub> Tricyclic Terpanes vs. C <sub>23</sub> Tricyclic/C <sub>24</sub> Tetracyclic Terpanes) for Oils from the Gulf of Guinea ...	70
Figure 46:	Standard Plot Separating Gabon-Angola Oils Based on Presumed Source Rocks (Additional Worldwide Source Rock Examples Added) .....	71
Figure 47:	Cross-Correlation of C <sub>25</sub> /C <sub>26</sub> Tricyclic Terpanes vs. Tetracyclic Polyprenoids/C <sub>23</sub> Tricyclic Terpene as an indicator of Lacustrine Source Type.....	72
Figure 48:	Mass Fragmentograms (m/z 191) for Seep Oils from Sao Tomé and Principé (red lines allow a common registration of the two analyses) .	75
Figure 49:	Use of Carbon Preference Indices (CPI) indicates that most Oils found in the Gulf of Guinea are Early-Mid Mature .....	76
Figure 50:	Ternary Plot constructed from Saturate, Aromatic and Polar Oil Fractions indicating Families of Oils Delineated by Bulk Chemical Composition .....	77
Figure 51:	Comparison of C <sub>29</sub> Sterane Maturity Parameters, showing the Gulf of Guinea Oils to be Mainly Early-Mid Mature for All Families.....	78
Figure 52:	C <sub>27</sub> Ts/Tm and the C <sub>29</sub> Homologue as Maturity Indicators for the Oils of the Gulf of Guinea .....	79

---

Figure 53:	C <sub>29</sub> and C <sub>30</sub> Hopane/Moretane Ratios as Indicators of Maturity for the Oils of the Gulf of Guinea .....	80
Figure 54:	The Relative Abundance of the Saturate Fraction in Oils increases with Maturity and also Anomalously with Fractionation .....	81
Figure 55:	Isoprenoids/n-Alkanes versus 25-Norhopane Ratio indicating the Mild and the Main Phase of Anoxic Intra-Reservoir Biodegradation Respectively.....	82
Figure 56:	Estimation of Water Washing from Aromatic Gasolines Relative to their Saturated Cyclic Homologues .....	83
Figure 57:	Low/High Molecular Weight Ratios of Tri-Aromatic Steroids vs Terpanes as Indicators of Fractionation of Gulf of Guinea liquids .....	84
Figure 58:	Pregnanes (C <sub>21</sub> +C <sub>22</sub> Steranes/Regular + Iso C <sub>29</sub> Steranes) and nC <sub>17</sub> /nC <sub>27</sub> as a Measure of Fractionation of Gulf of Guinea Liquids .	85
Figure 59:	Informed Basis for Predicting the Most Probable Source Rock from an Oil Analysis .....	86
Figure 60:	Map showing Distribution of the 4 Oil Families identified in the Gulf of Guinea .....	87
Figure 61:	Isotope and Molecular Characteristics of Rio Muni Oils (Family A) Showing Field Locations on an Upper Cretaceous GDE Map.....	89
Figure 62:	Isotope and Molecular Characteristics of Kribi-Campo Oils (Family B) Showing Field Locations on an Upper Cretaceous GDE Map .....	91
Figure 63:	Isotope and Molecular Characteristics of Benita I-1 and Belinda O-3 Condensates Showing Field Locations on a Paleogene GDE Map.....	93
Figure 64:	Isotope and Molecular Characteristics of Alba-Zafiro Oils (Family D) .	95

---

## List of Tables

Table 1:	List of Source Rocks Identified for initial screening for TOC and Rock Eval .....	4
Table 2:	List of Source Rocks Identified for Extraction and Molecular Analysis of Extracted Hydrocarbons plus Samples with Existing Comparable Data Appropriate for Oil-Source Correlation .....	6
Table 3:	List of Oils Obtained and Subjected to Molecular Analysis by GC/GCMS for the Current Study .....	7
Table 4:	Stratigraphic Summary Statistics of Raw TOC Values based on TOC >1% with Tertiary Samples Differentiated by Kerogen Type .....	15
Table 5:	Analytically-based Source Rock Properties for Southern Gulf of Guinea Wells and Coastal Outcrops .....	25
Table 6:	Analytically-based Source Rock Properties (>2%TOC, >2kg/t) based on Data from Southern Gulf of Guinea Wells and Coastal Outcrops .....	32
Table 7:	Summary of Geochemical Characteristics of Main Source Intervals...	51
Table 8:	Summary of Key Biomarker Characteristics of Rio Muni Oils (Family A). SR = source rock .....	88
Table 9:	Summary of Biomarker Characteristics of Kribi-Campo P-2 and other Oils, Including P-2, Sao Tomé and Principé Seeps (Family B) ..	90
Table 10:	Summary of Biomarker Characteristics of Block O & I Oils (Family C) .....	92
Table 11:	Summary of Biomarker Characteristics of Zafiro/Alba Distal Niger Delta Oils (Family D) .....	94
Table 12:	Oil-Source Correlation Matrix for the Gulf of Guinea Based on Bulk, Molecular and Isotopic Properties .....	96
